ABSTRACT:

This 23-minute videotape for grades 5-8, presents the myriad of animal life that exists on the planet. Students can view and perform experiments and investigations that help explain animal traits and habits. There are many different types of birds, over 9,000 different species. While not all birds take to the air, they all have feathers. Students take a look at the unique characteristics of birds, how they reproduce, make their homes, and migrate. A hands-on experiment is featured that demonstrates how an egg incubator can be used to hatch chickens. This program is based on the concepts outlined in the National Science Education Standards for Life Science: (1) structure and function in living systems; (2) reproduction and heredity; (3) regulation and behavior; (4) populations and ecosystems; and (5) diversity and adaptations of organisms. A teacher's guide is also included. (ASK)
